

Step into the most capable and modernized P210Ns on the market today. This fully loaded, pressurized Centurion has been transformed into a high-performance cross-country machine with a Vitatoe TN550 engine conversion (only 150 hrs. since top overhaul), cutting-edge Garmin glass panel (GTN 750/650, G500, GI-275, EFD1000), and TKS FIKI-certified de-ice system, plus air conditioning for added comfort. Major avionics upgrades include an L3Harris ESI-500 electronic standby instrument and a JPI EDM-930 engine monitoring system, providing enhanced situational awareness and engine data precision. Add in the S-TEC 3100 autopilot, Precise Flight speed brakes, SureFly ignition, and a host of premium enhancements, and you've got a serious IFR platform with unmatched safety, comfort, and reliability. With no known damage history and a fresh July 2025 annual, this aircraft is truly turn-key and ready to fly.

1980 Cessna Centurion P210N (N210KK)
